

About Us:

Synergy Firesec is an organisation providing Consultancy as well as Execution & other allied Services related to Fire and security Systems at all levels under one roof. We provide varied variety of Fire and security systems to suit the needs of residential, commercial and industrial environment.

As fire protection is more of a passion to us than business, at Synergy Firesec, we constantly try to excel by focusing on quality, innovation and customer satisfaction. We offers integrated services and solutions such as **Fire Fighting systems, Fire Alarm and Detection system, Gas Suppression System, Access Control system, Video Surveillance (cctv), Intrusion Alarm and Public Addresses systems** along with complete managed services.

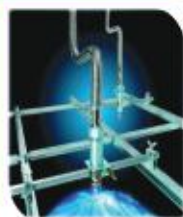

Our expertise comprises of consultancy, design, execution, commissioning & maintenance of all Fire & security Systems. With an exposure to working with renowned Clients, we have developed the capabilities to meet stringent design standards laid down by **NFPA, TAC, NBC** & other relevant authorities.

We, at Synergy Firesec, are a dedicated group and have adequate manpower resources headed by a team of professionally qualified and experienced engineers in this field who are capable of designing and executing large magnitude projects right from basic concept to commissioning stages. Synergy Firesec is a one stop solution for all your fire and security needs.

Why Choose Us?

- Fire & Security:** Synergy Firesec is a one stop solution for all fire and security related problems, as both fire & security systems are under one roof.
- Analysis:** At first we analyse the purpose & requirement of our client and then we suggest what suit best to their requirement within budget.
- Design:** Synergy Firesec has very strong design team, which works on all standards like **NFPA/TAC/NBC**.
- Quality:** The quality provided by us is uncompromising.
- Safety:** We adopt a safety first policy, to create a safe working environment.
- Planning:** Planning stands one of the most crucial roles in execution of any project, lack of planning will leads to the delay in project which in turns affect the budget.

Fire Fighting System:

A fire fighting system is probably the most important of the building services, as its aim is to protect human life, property and valuable assets.

It consists of three basic parts:

1. A large water storage tanks, either underground or on top of the building, called fire storage tanks.

- Pump Room comprises Jockey pump, Electric pump and Diesel pump.
- A large piping network, ending in either hydrants or sprinklers (generally all buildings require both of these systems.)

Synergy Firesec provide design, Installation, commissioning and maintenance of following systems for both new and existing facilities.

Fire Alarm & Detection System:

A fire alarm system is different from a fire fighting system, its purpose is to inform all humans in the building that there is a fire via an audible alarm, so that they may evacuate the building. Generally a fire alarm system is required only in important and public buildings (as per Indian Codes in 2008). However it is better to provide it.

Synergy Firesec provide design, Installation, commissioning and maintenance of fire detection and alarm system like conventional, addressable & Wireless fire alarm systems for small or large residential, commercial and industrial buildings.

Gas suppression system:

Gas suppression systems ensure rapid, thorough and economical response to fire. It protects facilities containing valuable corporate assets from people and processes to equipment and software. They combine the benefits of clean agent systems and active fire protection with people-safe, environmentally friendly performance. It discharges as a gas and hence leaving no residue to damage sensitive equipment. This enables you to get back to normal business operations faster after a fire.

- Electrical Room
- Process control centre

Integrated Security Systems:

An integrated security system is a system designed to detect intrusion – unauthorized entry – into a building or area. Security alarms are used in residential, commercial, industrial, and military properties for protection against theft or property damage. Restricting entry into your premises is the most important step towards attaining safety, only authorized users are granted access into your homes, bedrooms, safes, offices, cabins etc.

Effective security system protects your employees, assets and resources. Considering the variety of risks you face as a business, it is of first importance that your security system is sensitive to every threat, and fully integrated to provide a

complete web of security.

Synergy Firesec provide various type of integrated security and home / Office automation Systems for residential, commercial and industrial buildings.

Access Control System: Access Control systems increase security within your premises. These systems can be used to increase security at home and business places. In-built alarms in access control systems alert owners in case an unauthorized entry is attempted.

Types:

- Finger Print Reader
- Facial Recognition Systems
- Bio-metric system.
- PIN Combination
- RFID Card Reader / Proximity Card Reader.

CCTV: CCTV is one of the most important and commonly used security systems for home, business and public safety. Surveillance recordings from these CCTV cameras allow you to watch your property for any illicit and uncalled for activities.

Intrusion System: Intrusion systems are a good way of protecting your home and business places in your absence. Intrusion alarm system can be any device that sounds alarm when an unwanted intruder tries to enter in unauthorised area. The various sensors and detectors can be spread across your property from doors to windows and curtains or even safes and vaults, which trigger an alarm when an unwanted person tries to enter in restricted area.

Public Address System: A public address (PA) system is an electronic sound amplification and distribution system with a microphone, amplifier and loudspeakers, used to allow a person to address a large public, for example for announcements of movements at large and noisy air and rail terminals.
